

## Legend:

- Potentially complete pathway: will be evaluated with respect to site-specific target levels (SSTLs)
- O Minor or insignificant pathway: will be evaluated in a qualitative way
- IC Incomplete pathway
- na Not Applicable to the scenario
- <sup>a</sup> Dermal absorption for copper and zinc is insignificant (USEPA Region 9 PRGs, 2001)

Note: It is assumed that the Existing Slough will be capped and the New Slough will be constructed. Upon completion of the project, potential receptors will only be exposed to sediment and surface water in new slough.

Project No. 51-00070007.00	Rhodia - Martinez
